

Senior Network Engineer & Systems Specialist

This is a network and systems engineering consultancy role in a small team of well-regarded industry specialists.

At Prophecy Networks Ltd. we have expertise in the areas of network architecture, design, deployment, testing and operations for large organisations. Our business is growing, locally-owned and is based on the expertise of our people. As such, we are committed to providing tools, development and individualised support to our team. We believe in providing our engineers with the freedom they require to perform at their best for our customers.

This role includes:

- Work across both wired and wireless technologies at the level of large enterprise, government and telecommunications carriers
- Creation of new solution architectures
- Augmentation, upgrading and re-architecting of existing solutions
- Authoring of detailed design collateral
- Creation and validation of detailed build procedures
- Technical acceptance testing
- Work with technologies including IPv4, IPv6, BGP, OSPF, MPLS, VPLS, 3GPP, Sigtran, RADIUS, Diameter, Stateful Firewalls, Virtual Routers etc.

The ideal candidate will have:

- A background working in telecommunications and/or carrier grade networking
- The ability to articulate and document technical solutions clearly
- The ability to work well both independently and collaboratively
- Excellent presentation and customer relationship skills
- Experience with legacy technologies such as TDM, ATM, SS7 etc.
- Experience with a diverse range of platforms and will feel comfortable transferring skills between platforms and device types
- The ability to both innovate and work to established protocol as the situation or customer requires
